

BEEN PRIVACY POLICY

been PRIVACY POLICY

This privacy policy governs your use of the software application been (“Application”) for mobile devices that was created by Martin Johannesson. The Application is meant to help you keep track of countries that you have visited. The app visualizes the visited countries both as a list, along with a ratio for each continent, and as a world map. The map can be shared on social networks using standard system sharing functionality.

NO INFORMATION IS OBTAINED AUTOMATICALLY BY THE APPLICATION. The list of countries the user has visited is only stored on the device the app is installed on. Information is only passed on to other applications, in the form of a picture of a map visualizing the visited countries along with a sentence of text that states the percentage of the visited countries, when the user actively selects to share this information with other apps. If the user selects to share this information with another app, the privacy policy of the other app should be consulted.

Does the Application collect precise real time location information of the device?

This Application does not collect any information about the location of your mobile device.

Do third parties see and/or have access to information obtained by the Application?

No, unless the user selects to share the information with another app. In that case, the privacy policy of the other app should be consulted.

Your Consent

By using the Application, you are consenting to our processing of your information as set forth in this Privacy Policy now and as amended by us.
